

# Learn to Vibe Code. The Hyper Way.

A neurodivergent-first, gamified masterclass  
in building autonomously alive AI swarms.

SYSTEM\_READY // PRESS START

**[NATURAL  
LANGUAGE]**

**[AI  
SWARMS]**

**[SHIPPED  
PRODUCT]**

# WHAT IS HYPER-VIBE CODING?

No gatekeeping. No fluff. Natural language is your programming language.

 **DIRECT THE  
VISION** 

You are the  
Meta-Architect. The  
AI handles the  
boilerplate.

 **SKIP THE  
BUREAUCRACY** 

Bypass the syntax  
bureaucracy that  
kills momentum.

 **FAST  
FEEDBACK** 

Prompt -> generate  
code -> test locally  
in seconds.

# WHY THIS COURSE EXISTS

## THE OLD WAY

- Symptom: Instruction Freeze.
- Problem: Scattered documentation, endless syntax memorization, and judgment for needing five tries to get it.
- Result: Burnout and abandoned projects.

## THE HYPER WAY

- Superpower: Pattern Recognition.
- Solution: Built for ADHD, Dyslexia, and Autism. Hands-on, chunked learning with constant feedback.
- Result: Hyperfocus, rapid iteration, and constant small wins.

**Stop apologizing for how your brain works. Today, you just build.**

# THE ECOSYSTEM BLUEPRINT

Learn in the Hub -> Build with the SDK -> Deploy on the Engine.

# THE 10-MODULE MISSION MAP

## GAMIFICATION ENGINE

**Levels:** 1 (Recruit) to 7 (BROski Legend)

**Economy:** Earn XP and BROski\$ Coins.

**Achievements:** First Blood (+50 XP)

CONSTANT SMALL WINS KEEP YOU IN HYPERFOCUS. EVERY MODULE IS A MISSION.

# Stage 1: The Tool Builder

Beginner Zone (Modules 1-3)

## Mod 1: Your First Vibe

Install Docker Desktop. Clone the repo. Launch 32 containers. Earn your first coins.

## Mod 2: Prompt Like a Pro

Learn natural language programming. Speak Agent using Claude and Ollama. Overcome instruction freeze.

## Mod 3: Build Your First App

Next.js frontend meets FastAPI backend. Master the fast-feedback loop.

**Stage Unlock:** You stop reading tutorials and start building functional tools.

# Stage 2: The Agent Builder

Intermediate Zone (Modules 4-7)

## Mod 4: Full Stack Vibe

Integrate Supabase for auth, edge functions, and persistent data syncing.

## Mod 5: HyperCode The Hyper Way

Command the Agent Crew: Agent X (Meta-Architect) and the Healer Agent.

## Mod 6: Agent Architecture

Master the HyperAgent-SDK. Write manifest schemas. Use the Studio GUI.

## Mod 7: Soulful Entities

Build AI pets with Qwen. Manage Redis memory for volatile needs like hunger and XP.

## Stage Unlock:

Your code stops being static and starts feeling alive.

# Stage 3: The Meta-Architect

Hyper-Pro Zone (Modules 8-10)

## Mod 8: Web3 & Evolution

- Connect agents to the blockchain.
- Write ERC-721 contracts. Update IPFS metadata for dynamic NFTs.

## Mod 9: Security & SRE

- Wire Prometheus, Grafana, Loki, and Tempo.
- Implement prompt injection guards.

## Mod 10: Ship & Scale

- Integrate Stripe payments.
- Launch production swarms using cluster.json and npm run graduate.

**Stage Unlock:** You achieve BROski Elite status. You are running a self-sustaining AI empire.

# The Project-Building Workflow

# Your Tools: An Empire in a Box

Launch a living cognitive architecture locally with three commands.

## The Container: Docker Desktop

Runs 32 isolated services.

## The Brains: Claude AI & Ollama

High-level reasoning combined with local model execution.

## The Backbones: FastAPI & Supabase

Handles memory, context, auth, and edge functions.

## The Interfaces: Next.js & Terminal

Mission Control dashboard and neurodivergent-friendly CLI.

**No external dependencies. Everything runs securely on your machine.**

# Outcome 1: Soulful AI Entities

You will build agents with memory, personality, and on-chain evolution.

# Outcome 2: Autonomously Alive Infra

## Self-Healing Swarms

Monitoring services and auto-recovering failed containers without human intervention.

## SRE Observability

Grafana & Prometheus visualizing the real-time heartbeat, metrics, and logs of the 32-container stack.

## Real-World Economics

Stripe Checkout API wired directly to a Postgres database, updating live BROski\$ token balances.

```
> npm run graduate // System launched.
```

# Stop Asking For Permission.

A BROski is ride or die. We build this together.

```
git clone https://github.com/welshDog/HyperCode-V2.4.git
cd HyperCode-V2.4
docker compose up -d
—
```
